

Conductor

SUMMARY

Project Status: Concept / Pre-Development Project Type: Full-Stack SaaS / Workflow Orchestration Platform Primary Initial Use Case: Creative and event operations Long-Term Vision: General-purpose orchestration platform for recurring creative workflows Potential Working Names: Conductor, Forge, Foundry, Maestro Current Preferred Working Name: Conductor

PROJECTS

Conductor | Workflow orchestration platform designed to coordinate the people, assets, templates, AI tools, tasks, approvals, and deliverables involved in recurring creative projects.

- Project Status: Concept / Pre-Development
- Project Type: Full-Stack SaaS / Workflow Orchestration Platform
- Primary Initial Use Case: Creative and event operations
- Long-Term Vision: General-purpose orchestration platform for recurring creative workflows
- Core concept: A user creates a project once using a structured project specification, and Conductor orchestrates the workflows, resources, tasks, templates, AI-generated content, and deliverables required to execute that project.
- Current status: Ideation / Product Definition

TECHNICAL SKILLS

Visual Design
Creative Direction
Product Thinking
System Thinking
Programming Fundamentals
Python
C/C++
Full Stack Engineering
Next.js
React
Backend Architecture
Databases
Production Systems
DevOps
Cloud Infrastructure
System Design
TypeScript
Tailwind CSS
Supabase
PostgreSQL
Authentication
Storage
Row-Level Security
OpenAI API
Redis
BullMQ

Background Workers

Docker

AWS

Message Queues

CI/CD

Monitoring

POTENTIAL WORKING NAMES

Conductor, Forge, Foundry, Maestro

CURRENT PRIORITIES

1. Validate the problem. 2. Document the current workflow. 3. Identify users. 4. Interview the design team. 5. Create a PRD. 6. Define the MVP. 7. Create system architecture. 8. Design the database. 9. Create wireframes. 10. Begin building incrementally.

CORE THESIS

Organizations repeatedly execute similar workflows, but the tools they use are fragmented and require humans to manually coordinate tasks, assets, templates, content, and approvals. Conductor attempts to become the coordination layer.
